Goodbye Noisy Symptoms

Incidence of Urogenital infections : Urogenital infections are very common, so much that **80%** of women suffer from one or more Urogenital infection at some point of their life.

Although the types of infections and their symptoms were different , most patients suffer from mixed infections .

Most of the cases have high ratio of recurrence in the first year after infection

❑ Uro-genital infections contribute **1/3** of consultations in Gynecology

Lower Urinary Tract Infection: **50 %** - Bacterial Vaginosis: **50 %** at least 1 period with **50 %** suffering from relapses - Candidiasis : **75 %** at least 1 period with **45 %** suffering from relapses .

❑ Increased prevalence of multi-drug resistant pathogens

Relapses are associated with a failure to establish a healthy lactobacilli dominated vaginal flora

LactoGyn

20 vegetable capsules

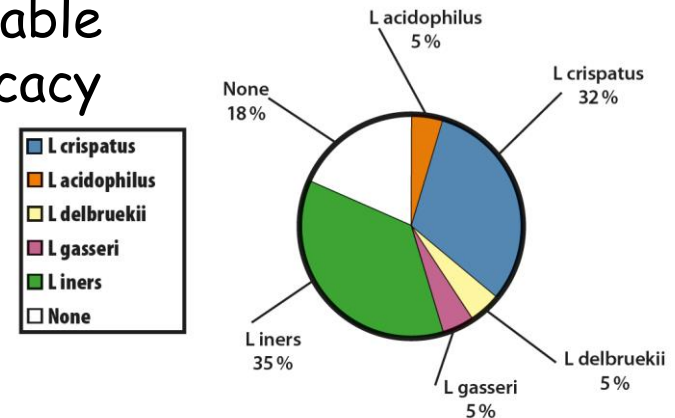

Goodbye Noisy Symptoms

Goodbye Noisy Symptoms

Women's satisfaction with *Lactobacillus Crispatus*
for the treatment of Bacterial Vaginosis ,J.M. Marrazzo et al, 2006 - Pittsburgh

424 women with Bacterial Vaginosis (**90 %** recurrent) - Age 14-35 years

Clinical signs & Gram stain evidence , treatments were 2 gram dose of oral metronidazole randomized to placebo or L. Crispatus capsule

Results :

Vaginal colonization with this exogenous strain of L. Crispatus (**88 %** colonization in the L. Crispatus group) Women who become colonized have better clinical outcomes than women who are not colonized by this strain plus it prevent the recurrence of these infections

LactoGyn consider the safest solution for Vaginal infection
